

## Lightweight Matte Box LMB-25

The Lightweight Matte Box LMB-25 is a robust two to three-stage 4"x5.65" filter size matte box suited to a wide range of applications, including handheld, crane work and Steadicam. Teamed together, the LMB-25 and the larger Lightweight Matte Box LMB-6 will suit most filters sized from 4" x 4" to 6.6" x 6.6".

### Wide-angle hood

The LMB-25 hood is easily removable via captive screws that remain attached to the hood at all times and therefore cannot get misplaced. On the ALEXA, the LMB-25 will cover wide-angle lenses up to 14 mm.

### Set of Mattes

The LMB-25 has its own set of five mattes that can be clipped onto the hood, helping to reduce unwanted glare and reflections according to the focal length of the lens being used.

### Two and Three-filter stage guides

Moving from two to three-stage filtration is easy with the LMB-25. The filter stage guides have well-spaced, independent filter frame locks and are machined from solid aluminum.

### Securing loop

For shooting situations where safety is paramount, such as when the camera is flying on a crane, the matte box can be secured to the camera rig using a karabiner fixed through the 10 mm securing loop located next to the LMB-25 hood.

### Interchangeable clamp adapters

The LMB-25 can adapt to various lens diameters via a series of interchangeable clamp adapters. The 134 mm clamp adapter will fit the larger ARRI/FUJINON Alura Zooms without limiting the amount of light passing through the lens. Other sizes include 143 mm, 136 mm, 130 mm, 125 mm, 114 mm, 110 mm, 104 mm, 95 mm, 87 mm and 80 mm.

### 3/8" Accessory Shoe and Tray Catcher

The LMB-25 can be fitted with an accessory mount for 3/8" accessories such as ultrasonic measuring devices. The tray catcher offers security by preventing the loss of a filter frame in precarious and potentially dangerous situations, for example when the matte box is flying on a crane.

### Top and Bottom Flag

Constructed from a sheet of carbon, the LMB-25 top flag offers rigidity without adding excess weight. The flag can be fitted to the top or the bottom of the matte box and folds onto the hood, protecting the lens front element when the camera is moved.
